

**Department Of Electronics and Communication Engineering**  
**organizing**  
**Workshop on “PRODUCT DESIGNING EMBEDDED SYSTEMS”**  
**23 December 2011**

We organized a one day workshop on 23 Dec 2011 about “Gadget Making” for third year E.C.E students. Three people from **EPR lab** conducted this workshop .During the morning session they presented about the value of Engineering and the role of different domains of engineering in the industry. Then they explained about how to design a product using embedded systems. They conducted a practical session in the afternoon about circuit designing of a product using embedded systems. After attending this session students have developed their own interest to design and develop their mini projects.
